

Example Paper

This paragraph contains an inline parameter $\beta \in (0, 1)$ and a variable x_i used in the model.

The utility function is defined by

$$U_i(x) = \sum_{j=1}^n \beta_j x_{ij}. \quad (1)$$

A second expression is

$$\frac{\partial U_i}{\partial x_i} = \alpha_i + \gamma x_i^2. \quad (2)$$

Ordinary prose should not become a formula candidate. References may contain years such as 2024.
